## CORRIGENDUM

Kleinschroth F., Healey J.R., Sist P., Mortier F., Gourlet-Fleury S. (2016). How persistent are the impacts of logging roads on Central African forest vegetation? *Journal of Applied Ecology*, **53**, 1127–1137.

An error was found in the labels of Fig. 3. Two of the labels were transposed: road track and road edge were the wrong way round. The correct version of Fig 3 is reproduced below. This labelling error had no effect on the statements made in the text of the paper, and the detailed results of the effect sizes and confidence intervals for the models remain as originally shown in Table S1 of the Supporting Information of the published article. We apologize for this oversight.

**Fig. 3.** Effects of substrate (poor, intermediate), habitat zone (road track, edge), clearing width and time (years after abandonment) on frequency and basal area of individuals < 15 cm d.b.h. of commercial tree species, Shannon diversity index and above-ground biomass. Effect sizes are results from linear mixed models (for frequency: generalized linear mixed model) with AAC as a random effect, and are presented with 95% CIs; those that do not overlap the dashed vertical line are statistically different from zero. Negative values indicate negative correlations, positive vice-versa.
