Key for Gazetteer

General notes: fields are left blank if the variable is unknown. Some information has been duplicated across fields, to allow comparative analysis and in order to highlight specific variables (e.g. cf. 'On or within close proximity' and 'special features'). The gazetteer entries are placed in alphabetical and numerical order, e.g. *A.1*, *A.2* etc. Caerleon (*CAER*), Chester (*CHE*) and Wroxeter (*WROX*) are also placed in alphabetical order but come at the end of each alphabetical section e.g. *C.16*, *C.17*, *CAER.1* etc.

Gazetteer Number: each place has its own identification number, for example, *C1* for Caernarfon. If a place has more than one cemetery, a further number has been allocated, e.g. Llanbeblig road, Caernarfon, is *C1.2*. If burials are separated out within a cemetery they are identified with a letter e.g. *C1.2 (a)*.

NGR: in general, six or eight figure grid references are given. On occasion, where precise locations are unknown, only four figures are provided.

County: the current unitary authorities are used throughout, in keeping with *Britannia* and *Archaeology in Wales*. Where this might cause confusion, as many pre-1974 county names are still in common usage, the older county name is placed in parentheses after the current unitary authority.

Burial rite: inhumation or cremation is indicated with a tick.

Sex: M = male; F = Female; J = Juvenile; I = Infant.

Orientation: N = north; S = south; W = west; E = east
(e.g. N-S = north-south)

Number: number of burials. If the record refers to one of a number of burials the total number (or estimated total) follows a colon, for example, 1:15
Often the exact number is unknown, + is used to demonstrate this e.g. 3+ = three or more burials.

Date: E = early; M = mid; L = late; C = century; > = *terminus post quem*
(e.g. M2C = mid second century; EM4C = early to mid fourth century) (?R) = Roman date uncertain.

? before or after a date e.g. 1-2C? = probable or possible date of burial. This is based on the context and/or rite (see individual gazetteer descriptions for further details).

Mode of Enclosure: UC = urned cremation; UUC = unurned cremation; F = flagon; PV = pottery vessel; GV = glass vessel; OC = organic container; WB = wooden box; LV = lead vessel; SC = stone cist; Scfn = stone coffin; Wcfn = wood coffin; Lcfn = lead coffin; LL = lead lining; Shrds = shrouds; EC = earth-cut; EF = earth-fast; SL = stone-lined; T = tomb; AMPH = amphora.

Grave Form: UC = urned cremation; UUC = unurned cremation; CP = cremation pit; SL = stone-lined; SC = stone cist; SO = stone ossuary; LC = lead covering; DB =

Description
Lewis' TD (1833) reported a Roman urn filled with ashes, which was found during road repairs. The vessel was discovered a few feet below ground surface. The find spot was discoloured with ashes 'to a considerable extent'. The urn fell to pieces on removal. Lewis suggested the findspot was on the line of a Roman road leading to Carmarthen, 5km to the south east. Date of burial or existence of Roman road not substantiated.

Description Site location: 3.5km from Caerleon and 1.5km from civilian settlement at Bulmore.

Small cemetery containing nine extended inhumations. Close to postulated defended Iron Age/Romano-British farmstead. Five graves in slab-built cists and three in earth-cut graves (2 of these contained wooden coffins). One grave unexcavated. Careful alignment, but not all true E-W (Anne Leaver, pers. comm). Only a small amount of skeletal material survived. Close to Grave 3 a shallow pit contained a small amount of cremated bone and charcoal and may represent an unurned cremation.

C14 determination taken from Grave 4: ANB 190 1883 ± 44 BP calibrated a 2 sigma to AD 20 - AD 240. (1 sigma AD 70 - AD 220).

The cemetery was bounded on at least one side by a ditch.

Description

Approx 800m NE of auxiliary fort (founded pre-Flavian period).

1. Discovered in 1848 cist of 'rude stones' (approx 62cm by 46cm) containing 10 vessels, '5 vases each resting in a patera'. The vessels were positioned to the four corners of the cist with the largest, a flagon containing 'a dark, pasty substance', positioned centrally. The Samian bowl underneath the flagon had a potter's stamp IVLLIN, and was surrounded by charred bones to a depth of 5cm.
2. The same site produced a 'deposit of silver coins' (c. 1834) together with pottery, and skeletal material indicative of inhumation burials. Stone metalling suggests the cemetery flanked the road (Hall 1848, 172-3).
3. 270m from the above (Morgan 1876, 348) a cinerary urn containing burnt bones within a larger vessel. Another account of this find places it at Llangenny 4km north-west of Abergavenny (Anwyl 1909, 276; RCHAMW 1997, 276).

Description Found in 1992, NE of auxiliary fort - Part of cemetery A3.1. Discovered 7.5cm below modern ground surface.

Burial Assemblage:

Large grey coarseware jar containing cremated bone, soil and small pieces of tessera. (Bottom half of jar remaining).

Orange/red coarseware jar containing cremated bone and soil. (Bottom half of jar remaining). White ware flagon (complete).

Small white ware beaker (almost complete) still retains traces of an oily substance.

2 small brooches - one unseen undergoing restoration, the other, which is very fragmented, has a spring clasp.

1 iron ring.

Assemblage dated c.AD60. It is not clear whether one or more individual is represented.

Description

Late Roman/Emed cemetery within 200m of Bristol Channel. 45 extended inhumations cut through wind-blown sand. The majority of skeletons' shoulders were hunched - indicative of shroud use (Price 1987, 60). Various degrees of stone lining. 4 complete cists with capstones. Coffins or wood linings were indicated in several of the graves by the presence of charcoal and staining.

Radio carbon dates suggest a long period of cemetery use. Cal. AD 241-409 (CAR-1087) to AD 686-877 (CAR-1041 (1 sigma). On a 2 sigma calibration the chronological span is from second to 10th century AD.

Pathology suggests some familial relationships. Bounded by a possible stream to the north and north east and to the south by a revetment wall and ditch. See also A4.2.

Description

War time construction and sand extraction uncovered a number of burials within the Atlantic Trading estate. No exact location. Cremations are reported in glass vessels. Inhumations in stone cists; earth-fast; and in lead coffins decorated with scallop shells. Coins were also retrieved, some of which may have been of late third century date. Since the war there have been oral accounts of further lead coffins being disinterred at the site.

The Sully coin hoard (now pinpointed at ST 1417 6825, Toft 1989, 19-22) together with probable Roman masonry indicate an associated RBS. See also A4.1

Description Auxiliary fort: Brecon Gaer also known as Y Gaer, Fenni-Fach est. AD 75-80. Brecon Gaer probably had a full garrison until the Antonine period, reduced garrison in the third, and limited reoccupation in the second part of the fourth century.

Part of a tombstone (RIB 403) found in 1877 in field 1.6 km north of fort:

"To the spirits of the departed (and) of Candidus, son of [...] nus, trooper of the Cavalry Regiment of Vettonian Spaniards, Roman citizens, of the troop of Clemens, from...; aged 20, of 3 years' service;.."

Dated by its formula to late first/early second century (Brewer, 1986, 22).

Additional Info Location of TS: Brecon Mus.

References (Simpson 1963, 37); (Nash-Williams 1969, 48-51); (Arnold & Davies 2000, 28); (Collingwood & Wright 1995, RIB 403); (Brewer, 1986, 22).

Description Auxillary Fort RIB 404

RIB 404: Tombstone (sandstone) originally depicting full length figures of man and wife. The inscription may have originally been as much as 7 lines long - now only three remain.

'...(set up by) his wife; he lies buried here.'

Now in Brecon museum, the stone was formerly placed along the Roman road from Brecon to Brecon Gaer, but had originally, in the sixteenth century, been found near to the fort.

Dated by its formula to L1-E2C (Brewer, 1986, 21-2).

Additional Info Location of TS - Brecon Mus. References (Collingwood & Wright 1995, RIB 404); (Brewer, 1986, 21-2).

Description

Crouched inhumation in central cist of ?BA barrow. The cist, which did not appear to have been tampered with, contained burnt animal bones, a wheel-turned sherd of pottery and a flat piece of limestone 'on which was roughly inscribed a cross within a circle' (Laws 1882, 54).

The 1880s excavations uncovered a number of extended inhumations in this barrow, some in stone-lined graves. Recent excavation immediately to the east of the barrow have revealed at least 6 further individuals. Radiocarbon dates from these burials show early to mid medieval dates: from cal AD 450 to cal AD 960.

A small masonry building (aligned e-w) was detected c. 62m north of the barrow.

Description

Segontium was established AD77. The garrison was subsequently reduced but the fort remained occupied until c. AD394 (Arnold & Davies 2000, 62, 143; Davies, J.L. 1995).

Vicus area: inhumation of female aged 35-45. Grave cut into refill of re-cut ditch bounding abandoned area of vicus. Body covered with 'large rounded stones'. Context Antonine - burial assigned to 2nd half of 2nd century.

At the foot of the burial was an Iron bar with 5 equally spaced holes drilled through 110mm. long, 15mm. thick, 25mm wide (?reinforcement for coffin, ?wooden box) and a BB jar (repaired with lead staples).

Evidence of Roman road running close by.

Description Segontium:auxillary fort

Gold 'phalater' (RIB 436) discovered 65m of fort in digging foundations for Cefn Hendre in 1827. Inscribed in Greek. No details surrounding the discovery were recorded. Find spot close to road running out from the south-east gate and within 140m of fort's known cemetery, which flanks the road further to the south-east. The location and apotropaic purpose of this find suggest a burial context. The date of the object (3rd- 4th century) make it more likely that any associated burial would have been an inhumation.

IA or EMED burials MC

On or within close Proximity MI

Description Auxillary fort

Cremation burials discovered approx 137m SW and 548m NE of fort. The latter site ran close to the river and was on the outskirts of the vicus. A cremation burial from the NE site was said to be female. Skeletal material is now lost but the vessel is extant and comprises a large, grey coarseware jar (45cm high). Raised collar with vertical incisions. The jar is decorated with two bands of incised grooves. The form of pottery suggests a late first century date (cf. Atkinson 1942, 285, A1 & A3, Collingwood 1932, fig. 57, 71)

Recent fieldwalking suggests that a group of barrows were also present to the NE of the fort (pers.comm., Dave Hopewell, GAT).

Additional Info Location of finds - one vessel extant: Rapallo House, Llandudno. References (Gardner A.C. 1925, 316-18) (RCAHMW Caern. 1956, 34)

On or within close Proximity MI

Description Auxillary fort.
Mid 19th century finds of several coarse ware burial urns in a field formerly called Wern Dwyndir ('Field of Hillocks'), c. 125m north-east of defences.

1885 discovery of sculptured and inscribed stone from same field : inscription in the name of a soldier of the Cohors I Nerviorum and possibly dedicated to Hercules (RIB 418). This stone lay close to a square enclosure surrounding a trench filled with soil and charcoal (2.7m x 609mm & 762mm deep). A large circular pit (0.91m dia & 1.05m deep) adjoining the enclosure contained Antonine pottery and, possibly, cremated bone (Simpson 1962, 146; Watkin, A.J. 1886, 285; Thomas D.T. 1885, 201-2).

Flavian cremations in coarseware vessels were discovered in 1949, 200m to the east of above site. Fragments of a glass flask and a small flagon of Central Gaulish ware (Dechelette 60) were in assoc.

Recent geophysical survey in the cemetery area: detected signs of burning and a square enclosure (14m x 14m).

Additional Info 1949 finds: NMGW

Description Auxillary fort c. AD 75- c. 110-20. Civitas capital is likely to have been established by mid second century.

Site location: 200m east of civitas.

Fine greyware globular jar containing skeletal material of female aged between 15-20. The urn had been placed in a circular pit.

Cinerary vessel contained fragments of pale blue glass - (? neck of a small flask) and three pieces of metal - one a possible nail.

From the surrounding fill came '18 fragments of similar pale blue glass, pottery sherds of several different types and 26 small metal objects, most probably nails'. Carbonised grape pips - possible legume fragments and cereal grain were also identified (Crane, 2001, 30).

There were indications of other burials in the vicinity including a possible inhumation (Pit 227). Small ditches may have functioned as cemetery plot boundaries. See also C4.2

Description Three cremations underneath the archaeological remains of a medieval monastic barn.

1. (F46) Cremation pit containing skeletal material in association with fragments of a small pot and flagon.

2. (F35) 13.5m north of F46. Cremation pit containing skeletal material, pottery fragments, fragments of iron (?) and nails.

3. (F27) Cremation pit containing skeletal material. No pottery present. Corroded iron objects and nails in fill - possibly the remains of a wooden box which enclosed burial. A 4-sided square gully (space enclosed 4.5m dia) surrounded this cremation. Interpreted by excavators as a wooden shrine. Possible further cremation within the southern end of enclosure. Pottery dated to ICAD. A coin in the immediate overlying layer, and close to the corner of the mortuary enclosure, was dated to AD41-54.

Cemetery may have been enclosed within boundary ditches.

Description Late Iron Age/ Romano-British farmstead.

A minimum of 7 late-fetal or early-neonatal infants and one older child/young adolescent. Skeletal analysis was unable to determine whether the infants were stillborn or died in the immediate post-natal period.

The stratigraphy and one C14 date points to burial of the infants between the immediate pre-conquest period and AD 250. (30 cal BC -250 AD; 2 sigma) A Roman date is preferred (Hughes 1996, 91). One infant burial came from the base of a rampart, the other six were incorporated into the interior of the settlement (three underneath a later structure). The older individual came from 100m north-west of the settlement. Site occupied until mid fourth century.

Description Site context: within 1km of a temporary camp and 2km of Brompton auxillary fort.

Lewis TD (1833) reports the opening of a tumulus near Offa's Dyke c. 1830 - one of several barrows in the area. Inside the barrow was a cist constructed of flag stones with a paved floor sunk 30cm below ground surface. One of the stones bore an inscription - 'very much obliterated'. The cist contained a small coin, 'with a legend quite unintelligible', in association with 'black dust' (? charcoal). Considered to be of Roman date by Thompson-Watkin (1878b, 78).

Description

Davies (1857, 167) reported an urned cremation south of the fort and on the southern side of the river at Maesmawr. Barnwell reported one, possibly two urned cremations. The first found c.1820 in the riverbank at Carnedd (SO022912), the second found c.1861 at Maesmawr (SO0391). However, there is the possibility that the reports were conflated and both refer to the same find (Barnwell 1870, 428). The date of the cremation(s) cannot be verified, but the proximity of the auxillary fort and definite Roman burials along the northern river bank (C10.2b) suggest a Roman date.

Description

Caersws auxiliary fort (Caersws II).

Burial context: vicus area

Excavations carried out in 1855 to the south of the Fort Bathhouse on the banks of the River Severn uncovered two (N-S aligned) inhumations situated between the bathhouse buildings and the river. Sex uncertain, gender (M & F) assigned on size of bones alone. No grave goods or coffins were evident. Roman cremation burials were found 'not many yards away' (See Gaz. No. C10.2(b))

Coin evidence suggests a period of continuing activity at the bathhouse from the 1C to the later 3C (Jones, N. 1993, 88).

Pottery associated with fort and vicus spans 1C - E4C, although the extent and nature of 3rd and 4th century occupation is unclear (Nash-Williams 1969, 66-709; Wilson 1968, 176, Arnold & Davies 2000, 62, 27-9).

Description

Caersws auxillary fort, site context: vicus

Two cinerary urns of Roman date (one complete, containing calcined bones, and fragments of another) were found between the extramural bathhouse and the river. Two inhumations (see 10.2a) were uncovered close by.

This stretch of land, between bathhouse and river, also contained bones (some supposed human) ashes and masonry. Samian ware and bone pins were also retrieved. The presence of burials in this area suggests some of these items may have represented grave goods.

Description Caersws auxillary fort, site context: vicus

Riverside cemetery.

Reports of an urn and human bones, ' a whole skull and other bones' found on the eroded banks of the River Severn in 1804 by Richard Fenton and Colt Hoare. They recorded 'several strata of charcoal' and recovered 'pieces of urns, and half a glass bead of a bluish colour'. Colt Hoare also purchased a complete urn found previously at this site (Fenton 1917, 35).

The skeletal evidence hints at both inhumation and cremation burials, as at C10.2.

The site is now unlocated (Jones, N. 1993, 90) and may, therefore, have been within the same area as C10.1 or C10.2.

Description Caersws auxillary fort: site location: vicus area.

1. NS aligned grave containing the silhouette of an inhumation. Outline of a wooden coffin. Nails, together with the remains of hobnail boots, were recovered from the southern end of grave.

2. Later EW aligned grave which cut grave 1. Outline of a wooden coffin. Iron nails at either end. No trace of human remains survived.

A possible third burial was identified in this area. No trace of human remains survived.

Pottery from the above site spans L1-L2C.

A further possible inhumation grave was identified at Greenlands (within 75m south-west of above site) also within the vicus area. Occupation at Greenlands: from the Antonine period into the 3rd century.

Description A 2nd century cremation of a child contained in a BBW cooking pot, covered by an amphora sherd. This site contained evidence of a Roman building with a probable demolition date of the late 3rd century. 136+ later inhumation graves on the same site produced C4 dates ranging from cal. AD 380-660 to cal. AD 785-1040 (2 sigma). Latest date may have been contaminated. Majority of graves E-W orientated but five exceptions, three of which N-S.

Earlier excavations 40m SE of the site, undertaken during the building of the vicarage (Morgan 1856, 425) uncovered 'three coffins, formed of rough slabs ... one contained three crania of persons of different ages'. This area is considered part of same cemetery (Cambell & Macdonald 1993, 76).

Description

Discovered in 1853, 0.33km south of Caerwent and 6-7m from the Roman road leading to Caerleon. A slab-lined cist grave containing a stone coffin with lead lining. Skeleton judged to be male. The head was towards the east. Both stone and lead lining were plain. The space between the stone coffin and cist was filled with 'a closely rammed body of small coal'.

There is a possibility that grave goods were present but removed by workmen.

Description

A carved stone lion was placed in an enclosure ditch close to the line of the main Roman road through Cowbridge. This sculpture had apparently been deposited with some care. As lions were a popular choice for funerary art, it is thought likely that it originally graced a tomb. British stone lions that have been dated are of the second century AD (Brewer 1986, 22-3).

Description Cremated skeletal material of adult male and child in BBW jar with cover stone. Late third - mid fourth-century date. The cremations cut through the fill overlying a series of gullies and pits. This site is thought to have been used for some kind of industrial activity perhaps centred around free-standing timber buildings. Pottery from the site dates from the E2C-M4C.

Description

Female inhumation dug into the silted-up ditch of IA/RB hillfort. The skeleton was much contracted. Although the buried was articulated, the bones had become partially disarticulated by the force of heavy rubble above. There were no objects found with the burial. No dating evidence, but excavator favoured late Roman date (level of ditch cut judged to have taken place during Roman period (Hogg 1976, 38). A few Roman sherds are said to have been found at a slightly higher level (Hogg 1963, 5). Roman activity at site dated by limited amount of pottery, ranging from 2nd to 4th century AD (Hogg 1976, 28 n.6)

Further possible burials are indicated just outside the south-east corner of the defences - O.S. map refers to human remains being discovered here in 1876 (Hogg 1976, 16).

Description

Part of a lead coffin lid found when ploughing a limestone ridge north of Cardiff. Decoration suggests military connection. As there was no evidence of funerary or other activity in the area, the lead is thought to have been carried as loot. Boon suggests from Caerleon (14km north-east), but the nearest cemetery is at Llanishen 3km to the south (see L8).

Description

Context: Multiperiod site. Late Roman/Emed inhumation cemetery on the site of BA cairn. First historic phase of the cemetery focussed on cairn - no dating evidence, but may have had late Roman beginnings.

Roman period activity: soil analysis of the fill of a large pit suggests a probable grave aligned NE-SW. Thought to be of contemporary with stone built Roman building in close proximity. There is evidence that the building was in use during the L1-E2C. The nature of the structure is unknown but suggestions include a temple or a watch tower (White & Smith 1999, 154). Bronze casting found in probable association.

Size and shape of pit suggests an extended inhumation. Stone lining within the 'grave pit' delineated a coffin-shaped area.

Unenclosed Romano-British settlement attested 400 SE of Capel Eithin (White & Smith 1999, 155)

Description

The Abbeyfield site contained c. 101 cremations, 50% of these were unurned. The majority of pottery assemblages were of late first/early second century AD. The cemetery is thought to have gone out of use by AD 140. Skeletal evidence attests to men, women and children, with adult males predominating. Stone foundations were interpreted by the excavators as a mausoleum (exterior dimensions 3.90 m x 3.80m).

The majority of the grave goods showed signs of being burnt on the pyre. Hobnails and wood-nails were also present in the cremations.

A head of Attis thought to represent a tomb finial was discovered 200m to the west of the Abbeyfield site (Boon 1972, 112).

Description

1. Approximately 150m east of the Abbeyfield site (CAER.2). Chance discoveries in 1910 produced fragments of a lead coffin and glass and pottery vessels. An extant glass jar and coarseware jar contain cremations. The pottery is dated c. AD 97-138. The square glass bottles (Isings form 50a & b) were common in the late first and second century (Allen 1998, 33-5; Isings 1957, 65-6) This same site produced a tombstone to a veteran (RIB 358) and a further tombstone fragment (RIB 392).

Further burials were discovered in 1936 and 1995, 200-400 m west of the above location

2. 1936 at ST335913 - Training College

lead coffin together with charcoal and fragments of pottery - either grave goods or representing cremation burials (Nash-Williams 1937, 325). Possibly the child's coffin held at Newport Museum (Acc. No. NPTMG: 89.381).

Approx 12 coarse ware lamps also came from this vicinity and probably represent grave goods (Boon 1972, 107).

3. 1995 at ST336913

Bathstone coffin containing male skeleton with grave goods of Kimmeridge shale bowl and glass vessel fragments. (cal. AD 140-230).

Description Site location: between the Roman road and Afon Llwyd, a small tributary of the River Usk. Nineteenth-century finds include 9 or 10 stone coffins, along with several cremation burials - at least one of which was contained in a glass jar. A third century glass sprinkler bottle was placed between the knees of a coffined inhumation. A first century pillar-moulded glass bowl, a small amount of Samian ware and an amber necklace found in the area probably represent grave goods. A sandstone cist to the south west of the site (ST33689099) was also of probable Roman date - no skeletal material remained (Lee 1862, 24, ft. note).

RIB 356 is reported to have come from this cemetery area (Lee 1862,10).

Additional Info Small finds: glassware, beads, ceramics - Caerleon Legionary Museum - on display.

Description Bulmore Road Cemeteries.

Ultra Pontem (known also as 'the village' and the 'Coed') is the site of Caerleon's famous pipe burial recovered in 1927. This cremation burial was wrapped in linen, housed in a lead canister and enclosed in a stone cist. A lead pipe lead from cremation to ground surface (Wheeler 1929). Samian ware in the backfill of the cremation pit has been related to the Antonine period (Julie Reynolds pers. comm.). Excavations in 1992 confirmed the exact location of this find and suggest that a circular structure 6-7m in dia. surrounded the burial - perhaps representing a masonry enclosure or tomb. 23 further cremations were found in close proximity and are dated by the pottery assemblages to the late second to third century AD. Bone inlay within the pits may be the remnants of decorated boxes (Burnham 1994, 250-1)

Reassessment of the skeletal material from the pipe burial and the later cremations has not been gender conclusive (pers. comm., Julie Reynolds).

The majority of objects had been burnt on the pyre.

The majority of tombstones recovered from Caerleon have come from the Bulmore cemeteries: Ultra Pontem forms the western extent. RIB 382, 370, 364, 385 were discovered close to Ultra Pontem, as was a further tombstone in 1987 (Hassall & Tomlin 1988, 490, no.4).

Description

1. Burials have been discovered over a 1.5km stretch from Ultra Pontem to the civil settlement at Bulmore, flanking the Roman road to Usk.

2. At Little Bulmore (ST355912), on the outskirts and west of the civil settlement: cremation burials, mausolea and/or mortuary enclosures (Yates 1999, 1 -20; 2000, 98-9).

3. Further to the east at Great Bulmore (ST 360915), a small inhumation cemetery of probable 3rd-century date lay within 30m of the civil settlement (Zienkiewicz 1985, 2-20). Consisted of 4 slab-lined graves and one stone coffin.

A funerary context for the coin of Trajan discovered in the Great Bulmore 'mausolea' is unsure, due to the disturbed nature of the site (Vyner 1978, 25-34).

Although not in situ, the majority of tombstones from Caerleon have been recovered from Bulmore Road and the Bulmore settlement and attest to military and civilian use (see RIB 359, 363, 379 367 371-5, 377, Hassall & Tomlin 1985, 324, no.6 and also CAER. 5).

Description A grave (no indication of type) constructed of legionary tiles, a Bath stone ossuary and sculpture of a funerary nature are recorded as having been found within 40m of the extramural bathhouse at Caerleon. A tombstone (RIB 376), although not in situ, may also have originally derived from a cemetery in this area. Further objects found in close proximity include a mensa dolenda and ivory fittings from a casket or funerary couch.

The table and 'casket' fittings date from the second or early third century.

Boon (1972, 106, n.358) suggests two amphorae burials, found just within the fortress defences, were displaced from this cemetery but see Gaz.no. CAER.8.

IA or EMED burials

On or within close Proximity LF

Description Nineteenth- century records infer both cremation and inhumation burials came from Infirmary Field (Watkin, W.T. 1886, 212-13). However, all the burials excavated in the 20th century (40+) were inhumations (Newstead 1914; 1921; 1946). The retrieval of skeletal material and epigraphic evidence from two tombstones (RIB 572 & 531) suggest the cemetery extended south to Bedwar Row (SJ401663) and north towards Pemberton Parlour (SJ401665). The cemetery contained men, women and children, including one neonate. Grave construction varied and included simple earth-cut graves, stone-lined cists, and graves formed of tegulae. A solid masonry tomb enclosed a female inhumation.

Coin evidence suggests the main period of use was Antonine. A coin of Domitian found in a grave in 1858 (Watkin, W.T. 1886), and a probable third-century vessel in grave 18 (Newstead 1921,54; Philpott 1991,58), suggest the cemetery may have been in use from the late first/early second cemetery to the early third.

Description

An inhumation burial found in association with a coin of Vespasian (AD 69-79) came from a garden in or near Grey Friars - 75m south of the bathhouse (est. late first century). A black burnished jar 'found near the baths' may also have held a cremation (Gros. Mus. Records: acc. No. 166/1900).

A tombstone found during construction work in Watergate Street may represent a further burial in this area, although doubt surrounds its provenance (Watkin, W.T. 1886, 208; Lawson 1928,179).

Description Several areas were utilized for burial south of the bathhouse at Watergate between Grey Friars and the river bank at Dee Stands (approx NGR refs: SJ402660; SJ401660; SJ401659; SJ402658). At least 11 inhumation burials are attested, including the grave of Flavius Callimorphus & Serapion marked by an in situ tombstone (RIB 558). Coins associated with the burials were of the late first century. A further tombstone (unrecovered), pottery and coins found in the vicinity indicate more burials. It is unclear whether the burials formed part of one cemetery or were clustered in small discrete burial zones broken up by the developing canabae. Grave goods of note include a 'massive' gold ring, apparently spirited away by workmen (Watkin, W.T. 1886, 215) and a nicolo intaglio, of late first- or second-century date, depicting the muse Thalia (Henig 1976, 35-6).

Description The spring at Boughton, 1.5m from the Legionary fortress, was the source of the fort's aquaduct. Cremation burials have been discovered over an area measuring 700m x 800m. At the Cherry Orchard site (SJ42264), close to the source of the spring, a small shrine was uncovered containing an altar dedicated by the Twentieth Legion to 'the nymphs and fountains' (Watkin, W.T. 1886, RIB 460). A group of at least 6 cremations were found in close proximity to the shrine (Strickland & Davey 1978, 40).

Additional pottery vessels formed the majority of grave goods and include three flagons and one amphora. Non-ceramic grave goods consist of an urned cremation accompanied by a glass phial and covered by a sheet of glass from Stocks Lane (SJ422660:Newstead 1899, 156-8), and a coin of Vespasian which may have been associated with a burial assemblage from Batchelors Lane (SJ422656).

Description Handbridge to the south of the legionary fortress, and across the River Dee, appears to have been Chester's most extensive cemetery. Burials have been found over a wide area on this side of the river - principally flanking a 1km stretch of road leading to the civil settlement at Heronbridge. Cremations and inhumations are attested - the majority cremations. The cemetery was used for men, women and children. Simple urned and 'unenclosed' cremations dominate the burial record but a lead ossuary and a stone coffin with lead lining are also recorded (Watkin, W.T. 1886, 218-19). Coping stones attest to some fine tombs towards the southern extent of the cemetery (Wright & Richmond 1955, 55, 57; Williams, W.J. 1928, 216-17; Newstead 1946, 124-6); and within the same area there is evidence to suggest a columbarium which contained vases and lamps (Watkin, W.T. 1886, 217). Tombstones have also been found at Handbridge (Watkin, W.T. 1886, 217-18; Petch, D.F. 1976, 31-4; Williams, W.J. 1933b, 56-59, RIB 510). Coin evidence suggests burials at Handbridge from the first to early fourth century AD (Ormerod 1882, 379).

Description

A number of burials have come to light north of the fortress. In 1984, a seemingly isolated male inhumation, contained in a lead coffin (pos. 2nd century AD), was discovered 220m outside the north gate and east of the Roman road. The coffin was undecorated. Size = 1.82m length x 0.38m to 0.42m wide and 0.28m deep (internally).

Cremation burials are recorded 500m north of the fortress and were discovered both sides of the conjectural line of the Roman road. An assemblage found at Kingston House, Liverpool Road, contained a cinerary urn, possibly a flagon, tettine and a coin of Domitian (Gros. Museum Acc. Nos., 1870, 345-348; Watkin, W.T. 1886, 220). Samian ware and 'bronze objects' are also thought to have come from this cemetery area (Lawson 1928, LXXXIII).

It is suggested that the tombstones found in the north wall at Chester came from north of the fortress (Thompson, F.H. 1965, 49; Mason, D.J.P. 1987, 166).

Description

A number of cremation burials have been found within the north-eastern section of the fortress. The first of these discoveries was made in 1848: a two-handled flagon (the 'Stevens' urn) containing skeletal material had been placed in a circular pit, hewn through the bedrock. This flagon was later dated to the Neronian period (Mason, D.J.P. 2001, 31-2). Two other cremations were found in close proximity (Watkin, W.T. 1886, 214). Further cremation burials dated to the second century were discovered in the same area in the 1970s. These have cast doubt on the early deposition of the 'Stevens' urn, and it is now postulated this may have been a second-century deposit in an earlier vessel (Mason, D.J.P. 2001, 33). The second-century cremations were deposited at a time when portions of the fortress were abandoned. During this period an infant burial was inserted through a deposit of silt and mud which had built-up behind the principia.

Description Heronbridge was the site of a civil settlement 2.5km south of Chester legionary fortress. A 'considerable number of sepulchral urns' found at Primrose Hill at the southern end of the settlement may represent an associated cremation cemetery. No dating evidence - (?prehistoric, ?Roman).

Inhumations: excavations at the site during the 1930s uncovered human remains 'over an extensive area'. Fourteen skeletons were examined and around half of these showed clear signs of trauma. Burials were aligned east-west. Although the site was much disturbed the burials were initially believed to date to the second century AD (Petch, J. 1933,19-21). The stratigraphy of the site is complex and others suggest a post-Roman date.

Description

Quantity of skeletal material within and around hillfort, attributed to both the Iron Age and the early Roman period (1st - 2nd century AD). The northern area of the fort yielded Iron Age skeletal material from within the ramparts and rampart ditch. Fragments of human cranium also attributed to the Iron Age were found on three hut floors, and a jaw bone and fragment of skull were found in and close to the Iron Age entrances.

1. Fragmented skeletal material attributed to the 'Conquest Period' (1st - 2nd century) came from within the south-east entrance from the upper road surface (58.535/615) and from the rampart ditches - Ditch 2 (58.535/105-7; 58.535/1151) areas XIX-XX and XXXIII - also on the south-east side.

2. One proximal phalanx of a horse, and part of a human femur came from the southern ditch, apparently from a late Roman context (Gardner & Savory 1964, 222).

After a period of abandonment Dinorben was re-occupied c.A.D.260-355.

Description

The villa at Ely went through several stages of development, the latest stage seeing the construction of defensive earthworks c.AD 275 - 325 (Wheeler 1922, 31). Occupation is thought to have come to an end in the 4th century. Fragments of a baby's skull were found on the floor of Room 2 as was a third brass of Constantine I (A.D. 320-4), though not necessarily in association. The coin was in mint condition and represents the latest dateable object from the site.

An adult inhumation of Late Roman or Emed date is attested at this site see E1.1(b).

NB: Storrie (1894,128) also refers to part of a human skull found in Roman layers, but gives no site location.

Description Site type: it is thought likely that an official mining complex existed at Frith.

Discovered in 1828, while levelling Offa's Dyke:

22 Roman coins, along with 'several fibulae highly ornamented, rings of gold, silver, and copper, pins of ivory and silver, beads of glass and amber, part of a lamp with the word NINVS impressed on it, a votive altar with a mutilated inscription, and several urns containing calcined bones and ashes'. No record of context or stratigraphy.

The present whereabouts of the finds are not known. However, some of the coins were identified as Domitian, Antonine and Trajan (Davies, E. 1949, 233).

Description Burial in association with coin hoard.

Inhumation burial discovered in 1933 whilst quarrying. The grave was described as semi-circular and the alignment appears to have been N-S. It was not possible to ascertain the position of body. The burial was covered with large limestone blocks. There were no signs of a cist or coffin (though two iron nails of 'Roman type' were noted). A coin hoard was reported to 'lay beside the body' in a fabric container.

Hoard consisted of 91 coins and dated from AD260 - AD282. The latest coin was in very good condition.

Description Auxillary fort founded mid 70s. After a period of abandonment c. AD120, the site was reoccupied in the third and early fourth century - it is unclear whether this later occupation was of a military nature.

Site A4 (Ling & Ling 1973, 102 fig. 1). Possible stone cist against ruins of north-east angle of defences. A large slab, 30cm away from the outer side of the wall, created what is thought likely to have been a deliberate cist. The 'cist' contained parts of three Roman pots. A piece of calcined bone was found close by. One vessel dated to the 3CAD or later.

Description Interior of the fort.

Site B1(Ling & Ling 1973, 102 fig. 1). Cremation burials cut through the rear of the north-eastern rampart .

1. Shallow stone-line cist 50-60cm diam. Containing lower body of burnt brown coarseware pot, segment of buff-coloured lid and a ' small hollow clay ball'. An adult cremation was scattered throughout the cist. Around the grave were 'extensive signs of burning'. Immediately outside the cist were two halves of a corroded Samian cup.

2. 40cm south -west of burial 1. Possible 2nd burial: 'crushed remains' of 2 small grey ware pots. No evidence of ashes or bones.

3. 60cm north of burial 1 - small grey pot containing charcoal and calcined bones.

The near perfect condition of a carinated bowl, 3.20m away from the above burials, hint that this vessel may also have come from a funerary context (Ling & Ling, 1973, 115).

All vessels were dated to the Flavian or Trajanic period. Date of deposition reckoned to be no later than AD 120-130.

Description

Discovered in a quarry in 1910, (approx 2 miles from Caerleon), traces of human burials. Body position not recorded. Roman coins and personal ornaments in probable association.

The 'Grave goods' consisted of three gilt-bronze bow fibulae dated between the late first and second century. A bronze cosmetic set, fragments of an iron finger ring, bead and 3 coins (Trajan AD98-117; Marcus Aurelius AD171 and Carausius AD287-93).

Further articles (?) disposed of at time of find.

An iron leaf-shaped ?BA spearhead found at the same time (NMW Acc. No. 28.287.1).

A stone coffin (L21) housing a female inhumation was discovered within 300m of this site.

Description

Location 4km south of Caerleon.
6 + inhumation burials discovered during roadbuilding. The burials were 60-90cm below ground surface on bedrock and contained in 'rude coffins or cists' with no covering stones. In each case the head faced north. Finds consisted of the base of an 'olla-like' pot of grey ware and approx 6 iron nails 50-80cm long.

No firm dating evidence. Coin of Vespasian (AD 69-79) found 135m to the east.

Description Two urned cremation burials were found in 1910 on the southern bank of the River Ithon. Find spot c.500m east of the practice camps on Llandridod Common and of the Roman road leading to Castell Collen (c 2.5km distant). Two vessels were mentioned in 1911, one of pale grey ware in bad condition. The other is extant and comprises a two-handled black coarseware jar with lattice design, resembling black burnished ware but probably of local manufacture. It is inscribed with the word "ATTILLI". (Masc. Gen. - the ashes of Attilus). The vessel contained fragments of bone. (Gillam type 126 AD130-170).

Description

'Pieces of cinerary urns' were reported to have been found in a 2' rough-stone square cist grave at 'Newlands' in Llanishen in 1883 (NW 1927, 1937-9). A complete urn of BBW containing a cremation was donated to the NMW in 1900 and had been acquired in 1883 from Llanishen. The form and style of the jar suggest a 3C date (Evan Chapman, pers. comm.). Pieces of coarseware pottery of a local make form part of the same collection - it is not clear whether the complete urn was part of the same assemblage. This collection is most likely the same as mentioned by Nash-Williams, although he describes a L1C-E2C olla.

Description Primary or secondary barrow use in neighbourhood of prehistoric barrows (see RCHAMW Denbigh No. 272).

According to Lewis (TD 1842) Several tumuli were opened in Llanarmon parish. The largest barrow contained a human and a horse skeleton. Further barrows contained inhumations and cremations. No dating evidence for these burials. In 1831 a tumulus was opened 'and near its centre were discovered three urns of coarse clay, the largest of which, containing about three quarts, was filled with fine grey ashes; near them were several bones, a copper coin of the Emperor Nero [AD 54-68], a fibula of copper, gilt and enamelled, and a plain ring of the same metal'.

Description

At some time before 1870 a 'funeral urn with lamp and tears bottle' were discovered within a barrow at Dinas Bran (Clarke 1903-4, 443).

Finds cannot be traced but lamp and phial suggest Roman date. Probable secondary interment in BA barrow as, in addition to the 'Roman' finds, a cist within the barrow contained sherds of unbaked pottery and a large urn (Davies, E. 1929, 257-8).

Description

Site type: Roman copper mines - principal period of ore excavation second century AD. Antiquarian records report the discovery of several skeletons in 1760 & 1775 in the recesses of the caverns on Llanymynech Hill. Two of the skeletons are said to have been wearing bracelets - one of glass beads; one of gold. Tools or possibly weapons, a hearth and 'culinary utensils' were also reported, along with coins of the Antonine period. Two iron pickaxes alledgedly from the caverns (most likely the tools noted above) have now been identified as medieval or later (James Lawson, pers.comm.). It is not possible to determine how closely associated any of the finds were.

A Romano-British trumpet brooch reported to have come from Llanymynech Cave in 1875 is probably from the same mining complex.

Further human remains were found in the Ogof in the 1960s (Adult female and juvenile) and burials are also recorded from the hillside, as are numerous Roman coins spanning the Roman period (Tyler et al. 1999, 75-6; VCH Shrop. 1908, 266-7) There is no dating evidence for these burials.

Description A number of burials were found in the 1930s during reconstruction work on the Pentre-Meurig-Felindre Road (parishes of Llangan and St. Mary Hill).

One inhumation was discovered in a rough stone cist and covered by a capstone. Disturbed before context and position could be recorded. Roman pottery, including a black-ware "pie dish" and a grey ware jar of second to fourth century date, was found at the same time. It is not clear whether the pottery was associated with the burial.

Further north, more burials were discovered on the crest of the hill. Bones fragmentary. One skeleton, in grave hewn in bedrock, was preserved - extended position and E-W orientated. No indication of date.

Description

1. Late Roman/Emed cemetery next to graveyard of St. Dochdwy's Church. (total of 858 inhumations + disarticulated skeleton material from ealier graves.

Earlier phases of cemetery use suggested by:

Pit burial with potsherd of Late Iron Age date and a crouched burial in close proximity.

Inhumation associated with first century brooch.

3 further graves included Roman beads.

Late Roman phase indicated by a group of E-W graves, 5 of which contained hobnails. 4 burials (including one of the hobnail burials) had coins dated between AD 330-350.

2. Excavations on site of Roman villa 150m south, revealed post-occupation burial use.

Approx 30 burials. Two C14 dates (CAR 306) 775 ± 55 & (305) 795 ± 65 AD came from EW aligned graves. Possibility of earlier burials (Owen-John 1988, 147)

Description 43+ inhumations found on site of Roman villa. Attributed to both massacre and periodic formal burials. Some of the formal burials were 'enclosed in rough slab-lined cists' (NW 1953, 103). The burials cut through the floors and walls, so were clearly deposited when parts of the site were abandoned. Date of deposition not determined, but a late Roman phase cannot be ruled out. A possible Late Roman candidate is an E-W female inhumation which appeared to have a coin of Carausius (AD 286-93) in association (Nash-Williams 1953, 105-6).

Description Rock cut grave located approximately 183m south of present church. Thought to be the site of an ancient burial ground, since skeletal material has previously been recorded from the site. Rock hewn oval cavity aprox. 1.52m wide and 45cm deep containing 'black fatty matter, apparently the decomposed remains of the corpse' (Nicholl Carne 1872, 100). Unidentified metal object found in 'grave', compared to spurs and attributed to late Roman period (Crane 1872). Other possibilities include an open soleae - to protect a horse's hoof (see Dixon & Southall, 1997, fig. 82) and a cauldron or lamp hanger (see Manning 1985, 99-102, plates 44-6, 52). Roman material (including coins) are reported to have been found close to find spot.

Description Site context: auxiliary fort

?Bronze Age or Roman Barrow use.

Geophysical survey detected two concentric ditches and a series of low magnetic anomalies c.20m outside the eastern defences of the fort. Fragments of burnt bone were retrieved from the site. It has been argued that this probably represents a BA barrow and associated cemetery (Crew & Crew 1997, 18). However, though this feature is aligned on BA barrows in the vicinity, it is smaller and different in form. In size (c. 11m) it is comparable to the possible tomb/barrow at Pennal (P11). No dating evidence, but proximity to Roman fort make Roman primary or secondary use a possibility.

Description A Bath-stone coffin containing a female skeleton was found in April 1939 at a limestone quarry. Orientated east-west. No grave goods were found but two iron nails were found just outside the coffin.

Roughly kite shaped
External measurements: Length 6'7";
Width: widest part 2', (at foot) 1'3".
Depth: 1'9".
Thickness of sides 4".

Further skeletal material found in the immediate area (disarticulated).

Due to the area's redevelopment the exact location of the coffin cannot be pinpointed, but it is within 300m of the Roman cemetery (L5).

Description

'scattered cremated human remains' together with brooches, pottery, metalwork and glass, uncovered from pre-Flavian contexts. The material was dated to the mid first century. This site was subsequently terraced and overlain by one or more timber buildings, also of probable first century date. The excavators suggest that this area formed part of a cemetery (c.50m) distant from a V-shaped ditch which has been interpreted as the outer defences of an auxiliary fort.

Description Possible mausoleum associated with villa site.

Excavations in 1998 revealed the foundations of a Roman building sited close to the presumed site of the Roman bathhouse identified in 1785. This building is believed to correspond with antiquarian reports of a second building in this location - identified at the time as a possible mausoleum as two skulls were found inside. No dating evidence for the skeletal material.

Pottery and coin evidence from site predominately from the 3rd and 4th century AD.

At SO069262, approx 400 metres from the bathhouse a further burial was uncovered in 1784 - no dating evidence and may be prehistoric cist burial (UCB 3, RCHAMW Brecks. Part 1, CPAT record No. 12393).

On or within close Proximity cave

Description

This cave contained an assemblage of RB pottery, coins (1-4C), personal ornaments (including a brooch, bracelets and pins) and pottery. Skeletal material of five adults and one child. Although much disturbed in antiquity, the skeletal material is thought most likely to be associated with the IA/RB phases (but see Bruck 1995,276). Reports of numerous bones and further artefacts being removed from the cave prior to the 1931 excavation indicate that activity (domestic or funerary) was probably more intense than the arch record shows. There is evidence to suggest human activity in the cave from the EBA.

Branigan & Dearne suggest two periods of RB activity c.80-60 and c.270-400+.

Description Two inhumation burials (301 & 304) were recorded from the Gwent Levels. The graves were aligned (roughly N-S) alongside a drainage ditch on the E-W boundary. The land is considered to have been managed for pastoral agricultural purposes and was liable to periodic, possibly seasonal, flooding.

Both graves were earth-cut. Grave 301 contained timber remains and an iron nail - possibly the remains of a coffin. No gender detected but both skeletons represented young adults (aged between 17-25).

During the same phase c. AD 100-200, one adult cow, 3-4 juvenile cattle and a foal were also buried at this site. These were placed in pits within silted-up ditches.

Description

Cairn field of 36+ cairns. One cairn housed a cist containing a Romano-British, buff-coloured pot sherd and burnt sandstone. No skeletal material apparent. The excavators interpreted the evidence as a native cremation burial. The fort at Neath (5km east) was seen as the probable pottery source.

Located close to an ancient ridge way (Cefn Ffordd) but also within c. 0.5km of a Marching Camp (SS7960 9870) (RCHAMW 1976, 99 No. 739).

Description
The skeletal remains of ? 6 individuals were excavated from Nant y Graig cave. No real stratification - deposits disturbed by water action and natural roll and slip. The presence of a BBW jar (2C-4C) led the excavator to favour a RB date for the skeletal material. Chamberlain & Williams (2000, 16) suggest they are more likely to be neolithic.

Description

Within 10m of Romano-British hut group. A series of stone lined cists (round in form) containing broken pottery, charcoal (?ashes) and beach pebbles. Ploughing close to cists uncovered a 'small urn of black pottery' approx 80mm in height and identified at the time as Romano-British. Pottery (apparently from the cists) consisted of 'polished black ware', Samian and imitation Samian.

Interpreted by Stanley (1868, 307-8) as Romano-British cremation cemetery. As finds cannot be traced, a funerary context is uncertain.

Description ? Multi-period use of Barrow/Cairn. Cremation in BBW jar. Found in possible assoc. with an Aureus of Titus (AD 79-81) and several other Roman coins said to have been coins of Vespasian (AD 69-79). Discovered c.1806 whilst digging to provide a secure foundation for the Corbalengus stone (Meyrick 1808, 1907 ed. 208-9). The find spot site is said to have formerly been under a mound, topped by a possible cairn, on which the Corbalengus stone (an EMED inscribed stone) was originally sited.

At an earlier date (around 1752) part of the mound/cairn was removed. It was reported that an urn was also found at this time, but was subsequently destroyed. The date of the urn was not determined and could have been of BA or Roman date (Barnwell 1862, 216).

As written descriptions of the pot vary, the Roman cremation urn was recently reassessed and indentified as a BBW jar of second century date, which had been heavily burnt (Evan Chapman, pers. comm.)

Additional Info	Finds: NMGW Pot: Acc. No. 05.176 Aureus stolen from NMW in 1980s. Other coins originally in Colchester museum - now unlocated.	References (E. Lhuyd,1695, col 648); (Meyrick, 1808 1907 ed. 208-209);(Anon, 1859, 328) (Vincent 1859, 350); (Jones, H.L.1861, 305) (Barnwell 1862 215 -16) (Davies, D.H. 1905, 165-6); (Nash-Williams 1950, 102); (Walrond 1960, 60-66);(Philpott 1991,40); (Davies & Kirkby 1994, 314-15).

Description AF Dolaucothi-Pumpsaint complex : military presence until mid-Antonine period.

'Cinerary urn containing burnt bones' found amongst the remains of a Roman hypocaust. Discovered in ' a niche of a wall of the Roman baths' (Evans, G.E. 1908-9, 59). Cinerary urns were recorded as being found at this site in 1831 and 1856. It is possible the reports are conflated.

An extant urn from this site is of a pedestalled type - 'La Tene III type' (Philpott 1991,40). The skeletal material is lost but in 1917 the remaining bones were identified as that of a small animal (RCHAM 1917, 31). The original photograph of the skeletal material shows the presence of sheep teeth (James Latham, pers. comm.) Human bone could not be identified.

Geophysics picked up a number of anomalies running alongside the Roman road and within 50m of the presumed bathhouse, which may represent further graves in the area (Burnham 2003, 16).

Additional Info	Location of pedestalled vessel: Camarthen Mus. Acc. No. A754694.	References (Anon AC 1878,320); (Evans, G.E. 1908, 58-59);(RCAHMW Carm. 1917, 31); (Lloyd 1935, 109); (Jarret & Nash-Williams 1969, 110,111); (Wilson 1974,398); (Burnham 2003, 13-21).

Description The evidence from Pentre farm suggests the site was originally an official complex. Two inhumation burials (c.AD 150 or later) were uncovered to the north of the complex. No further burials were detected in the immediate surrounding area.

Burial 2 P.1(b)

This grave was the later interment (see P.1a). N-S aligned - head to south. The grave was lined along the edges with dressed Hawarden sandstone. 4 pieces of re-used lead sheeting covered the inhumation. The lead was 'pierced in several places with iron nails'. (Granger 1989, 47). The lead was covered with pitched dressed Hawarden Sandstone blocks.

Skeletal analysis: individual aged between 30-40, size suggests female.

Piercing of lead may indicate the body had been in a wooden coffin. Grave construction may have formed a superstructure (Granger in O'Leary et al. 1989,47)

Description

Location: opposite St. David's Church and 0.5km from P7.1. Five E-W (head west) extended inhumations embedded in soil mixed with charcoal. Found in 1856 and located in SW corner of Ship Field. No trace of coffins or grave goods. Rough stone cist construction with partial stone topping. Finds from same area of the field consisted of Samian ware and other pottery including mortaria and amphorae, tile fragments, animal bones and coins (one identified as Trajan AD 98-117).

More recent excavations have identified extensive lead smelting on the site (Atkinson & Taylor 1924; Petch & Taylor 1925). Material from Ship field and Pentre Farm complex (See P7.1&2) indicate a period of activity in Flint ranging from the L1C - M4C (O'Leary et al. 1989, 122)

No dating evidence for burials (their orientation and proximity to the Church site may be significant). However, stone cists of definite Roman date come from P7.1 and may indicate local RB burial tradition.

Further 'Roman burials' are said to have been found to the east of the field when a house was constructed. (Petch & Taylor 1925,17). Map (Atkinson & Taylor 1924, figure 2) shows three separate groups of burials in linear arrangement.

Description Auxillary fort.

Antiquarian records of possible Roman burials.

1. 1803 survey: reference made to 'a very large urn of very coarse pottery, filled with small bones' found c.1800. This burial was located 300m south-west of the fort, close to Ewyn brook and supposed course of fort's exit road (see surveyor's map 1803, reproduced by Randall 1950).

2. ? Burial vault, 20m outside eastern defences and 1.5m below modern ground surface. Subterranean masonry structure (1m in height, 1m wide and 2m long) containing a quantity of bones. Burial rite not determined, but readily identified bone fragments (vertebrae, patellae etc.) and size of chamber suggest an inhumation.

3. Possible cremations: Colt Hoare's diary suggests that a cemetery, which contained Samian ware, lay to the north of the fort (Colt Hoare 1803, Thompson's edition 1983, 238; RCHAMW 1986, 148).

Pottery evidence suggests military abandonment of the site around AD140. Two fourth-century coins may indicate sporadic later occupation (?military)

Description

Burial urns were discovered in the early nineteenth century in the grounds of Pontruffyd House. The vessels contained cremated bone and were reburied. They were presumed Roman and are described as 'red at the bottom, and black in the bellying part, and had covers of the same manufactory' (Fenton 1808, 1917 ed.). Digging amongst the trees c.1850 uncovered 'Roman earthenware', suggesting the recovery of the first find (Anon 1856,188). Vague references to an earthwork have led to speculations that the urns were originally deposited in a barrow.

Description

Auxillary fort

Gradiometer survey detected a circular feature (c.12m dia) 120m from the south-western defences and alongside the fort's exit road, interpreted as a possible temple or tomb/barrow (Hopewell 2001, 11).

A layer of burnt clay, containing two burnt vases of Central Gaulish ware, was also located along this line of road (50m from the defences) and may represent pyre activity (pace Boon & Brewer 1981).

Aerial photography, geophysics and the presence of tile fragments suggest a bathhouse was also present on this side of the fort (Hopewell 2001, 11). This presumed BH stood approximately 30m from the defences, 85m north of the postulated tomb and 20m north of the possible pyre site.

The possibility that a series of 8 small anomalies to the north-east of the fort may represent cremation pits has also been raised (Dave Hopewell, pers. comm.)

Description

Site of an Iron Age Farmstead and Romano-British industrial settlement. Two fragmentary neonatal skeletons were 'located from layers' in a building used primarily for metal working (Nicholls 1989, 171). The building underwent two distinct phases of activity: constructed c. AD 90 it was re-built c AD120. It had fallen out of use by c. AD 140. The skeleton of a large dog was located just outside the north-west corner of the building.

Description

?secondary funerary deposit in BA barrow. Location: alongside ridgeway. Excavations (1955) of a Bronze Age barrow found evidence of a primary Beaker inhumation. This was cut through by a later cremation associated with a pigmy cup (Houlder 1956 & 1957). A reassessment of the pottery from the excavation found that a L1-2C red ware flagon was also included in the pottery assemblage (Michael Freeman, pers.comm.) The pottery consists of 9 fairly large sherds. There is no mention of this pottery in the excavation reports and its find spot cannot be verified. Exhaustive efforts to seek further documentation have not proved fruitful.

Description

Unumed cremation consisting of a series of distinct pockets of charcoal and cremated bone. A Roman copper alloy cup with a zoomorphic silver leopard handle was found on the edge of one of the pockets. The burial was overlaid by pottery of second- to fourth-century date and a fragment of window glass, suggesting occupation close by.

Description Segontium 1.5km. Three sides of a lead coffin found in 1878 amongst limestone stones and blocks (probable cist) previously disturbed. Inscription reads 'here lie the bones of Camuloris'. The coffin is rectangular and measures approx 91.5cm by 70cm. Indication of 'quicklime' filling. Find spot revealed evidence of 'tile and pottery together with ashes and calcined bones' - indicative of additional burials - possibly cremations (Williams, W.W. 1878, 140).

Nash-Williams argued for a 5th century date. Toller (1977, 76, n. 23) suggests L3-4C based on coin evidence: coins of Carausius (AD287-93) were found on site.

Additional Info Location of find: Bangor Museum References (Williams, W.W. 1861, 37-41);(Williams, W.W. 1878, 136-140); Hughes, H.H. (1926, 377-380); (N-Williams 1950b, 59-61), (Toller 1977, 43, 76); (Philpott 1991, 298).

Description A probable fort has been identified under the castle at Ruthin (Burnham & Davies 1990, 3; Waddelove & Jones G.D.B. 1990, 299-300)

Small cremation cemetery

1. Rectangular feature: 4-sided gully (3.5m x 3.0m externally) housing the cremation burial (pit 292) of a child together with the burnt remains of a possible flagon and 35 nail fragments.

2. (Pit 272) Outside, and 3m to the south of the above feature, unurned cremation of adult male together with 23 nail fragments (?hobnails or pyre construction).

3. (Pit 247) 5m SE of structure, cremation of an adult female in BBW jar - insufficient amount of pottery for close dating.

No stratigraphical evidence to link the above cremations with the rectangular feature, but most likely a mausoleum/mortuary enclosure.

4. Approx 30m to the north, cremation of a young adult male in a grey ware jar. Flavian-Trajanic date. Indications that further burials had been destroyed nearby (Waddelove et. al. 1990, 302).

12 E-W graves approx. 15m north of cremation 4. Six cut through Romano-British contexts and ' contained' residual sherds of Roman pottery', predominately of 2C date (Jones, N.1992, 22, 241). 1 grave contained pottery of a mid 4th century date.

Description

Site adjacent to possible Roman fort. A minimum of 13 coarseware vessels comprising a complete vessel and 42+ sherds dated to the Flavian-Trajanic period were recovered from this suspected cemetery site. Urns washed before inspection - no evidence of skeletal material.

Evidence that the soil was not cultivated, unlike the soil of a nearby site, may suggest that this was an area of demarcation marked out for burial (Waddelove 1982, 158).

Description Quarrying limestone in 1903 uncovered approx. 12 graves. They had been constructed by utilizing the weathered hollows in the rock and using larger stones to form the grave surrounds. Reports by the workmen suggest a coin was found in each grave. AE Hudd who investigated the site at a later date, and after some of the 'grave goods' had been 'distributed', reported that, in and around the graves, finds consisted of 'a few "third-brass" coins, several bronze fibulae, a bronze spoon, and sherds of various kinds of Roman pottery'. Skeletal material present. Coins examined by Hudd were of late third to mid fourth century (the latest Constantius AD 337-361). Orientation of graves not recorded. Hudd suggests possible paved road in near vicinity (Hudd 1908, 41)

Undated cave burials known from Ifon Quarry - NGR 46428819 (Chamberlain & Williams 2000, 10)

Additional Info Finds originally in Rolls Hall Museum, Monmouth but now unlocated. Recent work done: landscape survey by Dr Edith Evans (GGAT).

Description

? Female cremation inserted into the floor of what is believed to have been an L-shaped Romano-British structure (house/workshop). The burial cut through the cobbled floor of the building and was placed in 'a bowl shaped hollow' (46cm wide by 15cm deep). It was covered by a layer of burnt clay and charcoal 38cm thick. This hut group at Bryn Beddau (hill of graves) is thought to be of the same period as the other settlements on this hillside, occupied from the 2nd - 4th century (pottery is predominately 2nd century). There is no definite dating evidence for the group at Bryn Beddau. Metalworking was carried out at Bryn Beddau and nearby settlements.

The excavators suggested that the building had been deliberately fired subsequent to the burial taking place.

Description Auxillary fort occupied c. AD 78 - 150

Two barrow cemeteries are associated with the fort at Tomen y Mur.

1. 500m north-east of the fort: 11+ barrows, between 2m - 4m across. At least 5 are enclosed within square or sub-circular ditches. A sherd from a probable flagon was retrieved from the robbed-out top of one of the mounds.

2. 500m south-west of the fort: 6 barrows. The largest is surrounded by an irregular square ditch c. 10.5m x 11.4m with a central mound of c.2.4m. Adjoining the barrow is a smaller square-ditched barrow c. 8.4m sq. with low mound. 3 smaller barrows, within low-banked enclosures of square or sub-circular shape, are located 45m to the north of the monumental barrow and a further barrow lies 171m SE.

Both barrow cemeteries flank the exit roads leading out from the fort.

Description

One of a possible series of roadside burials. 'Traces of burnt bone were identified in 9 contexts' - but only one in situ burial. The cremation was contained in a redware flagon and was deposited in a sub-circular pit. Single hobnail recovered from overlying soil. Both adult and juvenile bone identified from the dispersed fragments of bone. It is probable the burials were contemporary with the military Flavian-Trajanic works depot.

A small quantity of animal bone was found in assoc. with the burnt human bone.

The burials are seen as broadly contemporary with buildings and industrial activity in the immediate vicinity.

Description
The exact location is not known. A manuscript account of 1736 reports an urn of 'Roman form' containing human bones. The vessel is reported to have been 46cm high and to have had 'beaded moulding' around the middle portion and base' (Banks 1874, 163-5). This burial was found in one of two barrows on the roadside between Brampton Brian and Walford. The distance between the two places is approximately 1km and Marching Camps are attested at both. Brandon Camp, a pre-Flavian military installation within a native hillfort, lies 0.5km to the east of Walford.

Description

'A number of Roman coins and a Romano-British cinerary urn' are reported to have been found within the grounds of Whitland Abbey. The vessel cannot be traced and a Roman date cannot be determined from the illustration (RCHAMW Carmarthen 1917, 152-3, fig.126). The recent confirmation that a Roman road ran through Whitland adds strength to the argument that there was a fort in the area (James, H. 2000, 23-46).

Description A cemetery flanked the road (Watling Street) to the northeast of the fortress/ civitas capital. Cremation burials were excavated in 1861 & 1923 - the majority contained in coarse-ware jars. Associated grave goods consisted, in the main, of ancillary vessels in ceramic and glass - some of which had been burnt on the pyre. A wooden box containing a surgeon's tools accompanied one burial. Other small objects, personal ornaments and possessions, were also recovered from the cemetery. Pottery assemblages suggest the main period of use was from the late first to mid second century. This site also produced three legionnaires' and one civilian tombstone (RIB 292,293,294,295), and the foundations of a tomb(s). Deposits of wood ash scattered across the cemetery may suggest pyre-related activities, and a square pit containing burnt material a possible bustum burial, as at WROX 4 (Wright, T. 1872, 346-7). The 1923 excavations at SJ57150928, field No.389 (Atkinson 1942), may represent the northern extent of the cemetery, but its full extent is unknown.

Description

Stone cist discovered in 1798. Located close to river and along the route taken by Watling Street during its earliest phase (White & Barker 1998, 41). Inside were three glass and three pottery vessels (a possible amphora and Samian ware). The cremations were contained in the glass bottles, each of which contained a glass phial. A lamp, a jaw bone (?animal) and a few coins of the 'Lower Empire' were also in association. A cairn marked the grave. If these coins were genuinely late Roman, then the date of this assemblage is 4th century. However, the inclusion of Samian and glass ware (usually found in L1-2C cremations) suggests otherwise.

Description

One definite cremation burial and 'considerable traces' of others found north of Wroxeter. The evidence suggests in situ cremation (Wright, T. 1872, 347). A large pit (1.83m square and 1m deep) contained an urned cremation. The sides of the clay-lined pit were reddened and hardened by fire. The cremation urn rested on flat tiles supported with clay and broken tiles. Underneath the urn was a coin of Trajan. A coin of Hadrian was also recovered from this cemetery.

Description

1. Insula 8: An unurned cremation of ?Roman date together with a blue -paste bead found underneath the floor of a house in the civitas capital. Gender and age not determined. First phase of house dated from AD 80 - AD 120.

2. Infant burials were associated with the civitas baths. One possible foundation burial: skeleton resting on the floor between construction phases - possibly of second-century date.

Description

Found in Wroxeter village (sometime before 1859) two 'unbaked earth' jars containing ashes. A lead ossuary containing bones and a pottery vessel are also recorded. It is unclear whether the two finds were associated. Find spot: within or just outside the southern corner of the town walls.
